DOCUMENT ID: BRD-FD-001 · VERSION 1.0 28 OCT 2026 · @SANJEEV SIMHADRI

Food Delivery & Chef-at-Home Platform – Business Requirements Document

The platform offers two services from one menu and one ingredient-kit model: freshly cooked food delivered from a hub, and a chef who brings the kits to a customer's home and cooks there. Customers use the Customer app, chefs and delivery riders share one Partner app, and hub and head-office staff use a web dashboard. This is version 1.0, for client review.

Document ID: BRD-FD-001 **Version:** 1.0 **Prepared by:** Sanjeev Simhadri

Status: For client review and validation **Date:** 28 Oct 2026

Audience: Client business owners, operations, finance, food safety, product and design, and the delivery team

1. Executive summary

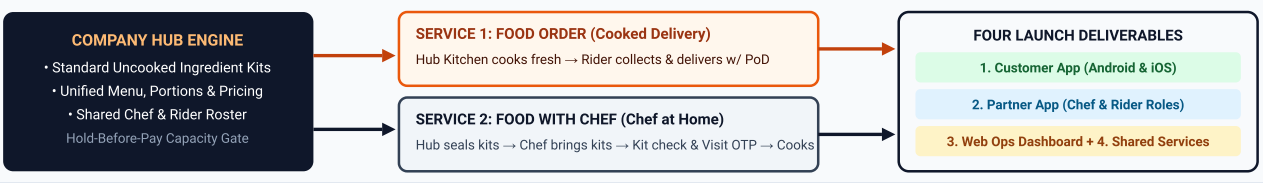

SECTION 01

The platform sells freshly cooked meals two ways, both made from the same pre-packed, uncooked ingredient kits held at company hubs:

- **Food Order:** the hub cooks the dishes fresh and a rider delivers them.
- **Food with Chef:** a chef from the hub brings the kits to the customer's home at a booked time and cooks there.

One kit model keeps the menu, portions, stock and pricing in one system, and lets each hub use its chefs for kitchen work and home visits from one roster. There is no fixed number of hubs or cities. Each hub has its own service zone, menu availability, kit stock, chef capacity and delivery capacity. An order goes only to a hub that can serve that address and fulfil that service at that time, and the customer pays only once the kits and chef time are held for them.

The launch scope has four deliverables: (1) **Customer app** (Android and iOS) for ordering food and booking chefs; (2) **Partner app** (Android and iOS), one app for chefs and delivery riders, with screens by role; (3) **Operations dashboard** (web) for hub managers, support, finance and super admins, with screens by role; and (4) **Shared services**: orders, bookings, scheduling, kit inventory, dispatch, payments, refunds, invoices, notifications, support and reporting. The biggest launch decisions still open are the minimum-order rule, the chef visit fee, the cancellation policy and the launch city (Section 20).

2. Objectives and success measures

SECTION 02

The platform succeeds if it fulfils confirmed orders on time from accurate stock, and lets the client open new hubs without new app releases.

2.1 Business objectives

OBJ-01 — Offer a consistent menu and predictable portions through standard ingredient kits. Core

OBJ-02 — Let customers order delivery or book a chef from one app, with one account and one payment flow. Core

OBJ-03 — Open new hubs and cities through dashboard configuration, not code changes or app releases. Scale

OBJ-04 — Accept only orders the hub can fulfil, using live stock, chef and rider capacity, and charge only for what is held. Stock

OBJ-05 — Give partners one simple app for all their work, whether they cook, deliver or both. Partner

OBJ-06 — Give operations real-time visibility of orders, partners, stock, payments and exceptions. Ops

OBJ-07 — Keep a full record of every order, cancellation, refund and admin change for support and audit. Audit

> **Operational Principle: Hold-Before-Payment & Configuration-Driven Scale**
> Across **OBJ-01** to **OBJ-07**, customer trust relies on reserving physical kits and verified chef slots *before* payment is captured, eliminating stock-out refunds while allowing head office to launch new hubs purely via dashboard configuration.

2.2 Success measures

Targets are set by the client before launch; the proposed starting values are suggestions only.

Measure	Definition	Proposed starting target
Order completion rate	Completed orders ÷ confirmed orders	97% or higher
On-time delivery	Food Orders delivered within the promised window	90% or higher
On-time chef arrival	Chef visits started within 15 minutes of the booked slot	95% or higher
Hub acceptance time	Payment confirmed to hub accepted	Under 3 minutes
Refunds caused by stock or chef unavailability	Paid orders refunded because kits or a chef were not available	Close to zero (given hold-before-payment)
Cancellation rate	Cancelled orders by reason, service and hub	Client to set
Kit stock accuracy	System quantity matches physical count	98% or higher
Customer rating	Average rating for food, chef and delivery	4.3 out of 5 or higher
Repeat customers	Customers who order again within 30 days	Client to set

3. Glossary

SECTION 03

Term	Meaning in this document
Hub	A company-run kitchen and store that holds kits, chefs and riders, and fulfils orders in its service zone.
Kit	A pre-packed, uncooked set of portioned ingredients for one dish at a set serving size.
Dish	A menu item the customer sees. Each dish maps to one kit (or a set of kits) and a standard recipe.
Service zone	The area a hub serves, set as a radius, a drawn map area or a list of postal codes.
Food Order	The delivery service: cooked at the hub, delivered by a rider.
Food with Chef	The home-visit service: a chef brings the kits and cooks at the customer's home.
Order	A confirmed Food Order.
Booking	A confirmed Food with Chef visit for a date and time slot.
Slot	A bookable time window for a chef visit, including travel and cooking time.
Guest count	The number of people a booking or order is for, used for minimum-order and portion rules.
Customer app	The mobile app customers use to order food and book chefs.
Partner	A chef or delivery rider approved by the client to work through the platform.
Partner app	The single mobile app all partners use. It shows chef screens, rider screens or both, depending on the partner's approved role.
Operations dashboard	The web app used by hub managers, support agents, finance reviewers and super admins, with screens by role.
Hold	Kits and chef time set aside for a customer for a short time while they pay, so no one else can take them.
Visit OTP	A one-time code the customer gives the chef on arrival, only after checking the chef and the kits (see Arrival kit check). Entering it confirms the right chef is at the right home with the ordered kits, and starts the visit.
Arrival kit check	The step at the customer's door where the chef shows the sealed kits and the customer checks them against the order list in the Customer app. If anything is missing, wrong or damaged, the customer reports it instead of sharing the visit OTP.
Assignment	Linking a chef or rider to a specific order or booking.
Exception	Any event that stops normal fulfilment, such as a stock-out, delay, no-show or failed payment.
Super admin	The client's head-office user who manages all cities, hubs, menus, prices and policies.
Priority	**Must** (needed at launch), **Should** (strongly preferred at launch), **Later** (after launch).

4. Business model and scope

SECTION 04

Both services share one catalogue, one kit inventory and one hub network; they differ only in where the food is cooked and who carries it.

4.1 Service lines

- **Food Order – cooked delivery:** *Customer experience:* Customer picks dishes, pays and receives freshly cooked food at the chosen address. *Fulfilment path:* Eligible hub holds the kits, cooks them, and a rider partner collects and delivers.
- **Food with Chef – chef at home:** *Customer experience:* Customer picks dishes, guest count, date and slot. A chef arrives with the kits and cooks at home. *Fulfilment path:* Hub holds kits and a verified chef's time, packs and checks the kits, and the chef partner travels, cooks and completes the visit.

4.2 Hub operating model

- Each hub has a unique ID, address, operating hours, service zone, supported services, menu availability, kit stock, partner roster and capacity.
- Authorised admins create, edit, pause and close hubs. Past orders stay linked to the hub that fulfilled them.
- A hub can pause new orders, close one service, mark a dish unavailable or block a slot without affecting other hubs.
- Partners belong to a home hub and can be moved or shared between hubs by an admin.
- If no hub can serve an address or slot, the customer is told before payment. The platform never assigns a hub that cannot serve the order.

4.3 Configuration levels

Settings are layered so a new city or hub inherits sensible defaults and only overrides what differs.

Setting	Platform default	City override	Hub override
Menu and dishes	Master catalogue	Dishes offered in that city	Dishes available at that hub
Prices	Base price	City price	Hub price, if approved
Minimum-order rule	Default rule	Yes	Yes
Delivery and chef visit fees	Default fees	Yes	Yes
Taxes and invoicing entity	Default	Yes (state registration)	No
Operating hours	–	–	Yes
Service zone	–	–	Yes
Booking notice, slot length, buffers	Default rule	Yes	Yes
Checkout hold time	Default	No	No
Cancellation policy	Default policy	Yes	No
Offers and promotions	Platform-wide	City-only	Hub-only
Optional features (WhatsApp, masked calling, chef accept/decline)	On or off	Yes	Yes
Support contacts and languages	Default	Yes	No

4.4 In-scope deliverables

1. **Customer app** for Android and iOS.
2. **Partner app** for Android and iOS: one app for chefs and delivery riders, showing each partner only the screens for their approved role.
3. **Operations dashboard (web)** for hub managers, support agents, finance reviewers and super admins, with screens by role.
4. **Shared services:** users and roles, partner onboarding, catalogue, serviceability, orders and bookings, holds, kit inventory, scheduling, dispatch, payments, refunds, invoices, notifications, support cases and reporting.
5. **Launch support:** testing, production setup, store submission for both apps, a pilot at one hub, documentation and handover.

5. Stakeholders and roles

SECTION 05

Seven roles use three products, and each role sees only what its job needs.

Role	Uses	Main responsibilities	Access limits
Customer	Customer app	Manage profile and addresses, browse, order delivery, book chefs, pay, track, rate, get help.	Own profile, orders, payments, invoices and support history only.
Partner – chef	Partner app (chef screens)	Set availability, view hub shifts and home visits, collect kits, travel, cook, update status, view earnings.	Assigned jobs and own profile only. Customer phone masked; address shown only during the active visit.
Partner – delivery rider	Partner app (rider screens)	Go on duty, accept deliveries, navigate, update pickup and delivery, capture proof.	Assigned deliveries and own profile only. Customer phone masked; address shown only during the active delivery.
Hub manager	Operations dashboard	Run the local queue, kitchen, dispatch, partner roster and onboarding, kit stock, availability and exceptions.	Assigned hub or hubs only.
Customer support agent	Operations dashboard	Review order context, log issues, apply approved resolutions, start permitted cancellations and refunds.	Read access to orders. Refunds above a set limit need approval.
Finance reviewer	Operations dashboard	Reconcile payments, approve refunds above limit, review settlements and tax reports.	Financial views and approved actions only.
Super admin	Operations dashboard	Manage cities, hubs, zones, catalogue, prices, policies, offers, users, partner approvals and all reports.	All hubs. Every sensitive change is logged.

Access follows least privilege. Changes to prices, policies, refunds, user roles, partner approvals, stock and service zones record who changed what and when.

6. End-to-end service journeys

SECTION 06

Both journeys check serviceability, stock and capacity, then hold what the customer needs before taking payment, so the customer only pays for what can be delivered.

6.1 Food Order – cooked delivery

1. Customer enters or picks an address. The platform checks it against active service zones.
2. The platform finds eligible hubs: open, offering the service, with stock and rider capacity.
3. Customer browses the hub's available menu and adds dishes. Each dish shows price, serving size, dietary tags and allergens.
4. The cart applies the minimum-order rule, delivery fee, offers and taxes, and shows an estimated delivery window.
5. When the customer proceeds to pay, the platform holds the kits for a short time (proposed 10 minutes) and shows the time left.
6. Customer pays. The order is confirmed only after the payment gateway verifies the payment.
7. The hub accepts the order, and the kitchen cooks and marks it ready.
8. A rider partner is assigned in the Partner app, picks up and delivers. The customer sees each status change.
9. The rider captures proof of delivery. The customer gets the invoice and can rate or raise an issue.

6.2 Food with Chef – chef at home

1. Customer picks address, dishes, guest count, date and slot.
2. The platform shows only slots where a verified chef, the kits for that date and hub capacity are all free.
3. Customer reviews the itemised price, chef visit fee, taxes, cancellation cut-off and what they must provide at home.
4. When the customer proceeds to pay, the platform holds the kits and the chef's time for a short time.
5. Customer pays. The booking is confirmed, and the customer sees the chef's name, photo and verified status.
6. Before the visit, the hub packs, seals and checks the kits, and the chef confirms collection and starts travel in the Partner app.
7. On arrival, the chef shows the sealed kits, and the customer checks them against the order list in the Customer app. If they match, the customer shares the visit OTP and the chef enters it in the Partner app, which confirms the right chef, the right home and the right kits. The chef then cooks and marks the visit complete.
8. Customer gets the invoice and can rate the food and chef or raise an issue.

6.3 Exception handling

Exception	Expected handling	Owner
Customer does not pay within the hold time	Hold is released and items return to availability. Customer is asked to recheck and try again.	System
Payment succeeds after the hold expired	Items are held again if still free; otherwise a full refund is made automatically and the customer is told.	System, then Finance
Payment succeeds but the order is not created	Automatic retry. If it still fails, automatic full refund and customer notified.	System, then Finance
No hub, slot, chef, rider or kit available	Blocked before payment with a reason. Another slot or service offered if one exists.	System
Dish or kit becomes unusable after confirmation (spoiled or damaged)	Hub contacts the customer: approved substitute (with consent) or partial or full refund.	Hub manager
Chef or rider declines, is delayed or cannot attend	Reassign. Notify the customer with a new time. If no one is available, cancel and refund in full.	Hub manager
Chef arrives late beyond the allowed limit	Customer may cancel for a full refund or accept a stated compensation.	Hub manager, Support
Incomplete address or wrong phone number	Partner reports it in the Partner app. Hub calls the customer. The no-show timer starts.	Partner, Hub
Customer unreachable or not home	No-show policy applies: wait time, contact attempts, then cancel with the agreed charge.	Hub manager
Home facilities not usable (no gas, no stove)	Chef reports with a photo. Hub decides: cook a reduced menu, cook at the hub and deliver, or cancel per policy.	Chef, Hub manager
Missing, wrong or damaged items	Customer raises it within the allowed time with a photo. Support resolves per refund policy.	Support
Refund pending, failed or needs review	Tracked in the refund queue. Escalated if it passes the refund time limit.	Finance
Safety incident during a visit or delivery	Partner or customer uses SOS. Hub and the client's safety contact are alerted at once.	Hub manager, Client safety owner
Kits at arrival are missing, wrong or damaged	Customer reports it in the Customer app instead of sharing the visit OTP, and the chef reports it in the Partner app. The hub sends replacement kits, agrees a reduced menu with a partial refund, or cancels with a full refund.	Chef, Hub manager

7. Order and booking lifecycle

SECTION 07

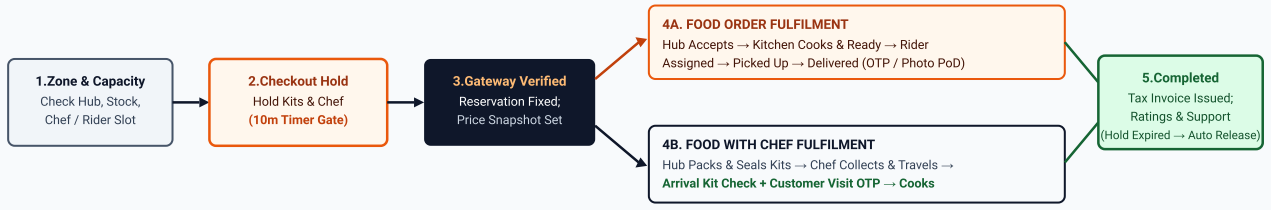

Figure 7.1 — Order & Booking Lifecycle State Flow (Hold-Before-Payment, Gateway Verification & Doorstep Visit OTP Gate)

The customer pays only after the kits and chef time are held, the hub sees an order only after payment is verified, and a chef visit starts only after the customer's visit OTP confirms the chef and the kits.

8. Functional requirements

SECTION 08

Each requirement has an ID used in testing (Section 18). Priority: **Must** = needed at launch; **Should** = strongly preferred at launch; **Later** = after launch. The client confirms final priorities.

8.1 Customer app (FR-CUS-001 to FR-CUS-018)

FR-CUS-001 — Sign up and sign in with mobile number and OTP. Sessions expire securely; customer can log out.	Must
FR-CUS-002 — Manage profile, saved addresses with map pin, delivery instructions and location permission.	Must
FR-CUS-003 — Check serviceability by address and show clearly which services are available there.	Must
FR-CUS-004 — Choose Food Order or Food with Chef, each with its own menu, fees and rules.	Must
FR-CUS-005 — Browse, search and filter dishes with photo, description, price, serving size, dietary tags and allergens.	Must
FR-CUS-006 — Show availability by hub, service, time and stock. Unavailable dishes cannot be added.	Must
FR-CUS-007 — Cart with quantities and an itemised price summary.	Must
FR-CUS-008 — Enforce minimum-order and guest-count rules and explain any failure in plain words.	Must
FR-CUS-009 — For chef visits, pick date, slot, guest count and notes such as kitchen access or dietary needs.	Must
FR-CUS-010 — Show delivery fee, chef visit fee, taxes, discounts and total before payment.	Must
FR-CUS-011 — Pay by UPI, cards, net banking and wallets through the payment gateway, and see the payment result.	Must
FR-CUS-012 — See confirmation, order details, cancellation eligibility and status history.	Must
FR-CUS-013 — Track the rider for deliveries. For chef visits, see the chef's name, photo, verified status and arrival ETA.	Must
FR-CUS-014 — See the visit OTP and the list of ordered kits on the visit day. On arrival, check the chef's kits against the list, then share the OTP to confirm, or report a missing, wrong or damaged kit instead.	Must
FR-CUS-015 — Use an in-app SOS during a chef visit that alerts the hub and the client's safety contact, with one-tap call to 112.	Must
FR-CUS-016 — Download a tax invoice for each completed order or booking.	Must
FR-CUS-017 — Request cancellation or help, see eligibility and the expected refund amount and time.	Must
FR-CUS-018 — Receive order notifications by push, SMS or WhatsApp, with consent recorded.	Must

8.1 Customer app (continued: FR-CUS-019 to FR-CUS-026)

FR-CUS-019 — Delete account and personal data on request, except records the law requires the client to keep. Must

FR-CUS-020 — See the time left to complete payment while items are held; if it runs out, availability is rechecked. Must

FR-CUS-021 — View order history and reorder, with current prices and availability rechecked. Should

FR-CUS-022 — Rate and review food, chef and delivery after completion, subject to moderation. Should

FR-CUS-023 — Access FAQs, support contacts and a reference number for each reported issue. Should

FR-CUS-024 — Pre-order a Food Order for later the same day or the next day. Should

FR-CUS-025 — Use the app in the launch languages agreed with the client. Should

FR-CUS-026 — Save favourite dishes and get dish recommendations. Later

8.2 Partner app

One app serves chefs and delivery riders. A hub manager registers each partner, a super admin approves their role after verification, and the app then shows only that role's screens. If the client uses a third-party delivery company instead of in-house riders, the rider screens are replaced by that company's integration (Section 16).

8.2.1 All partners

ID	Requirement	Priority
FR-PTR-001	Sign in with OTP on the mobile number registered by the hub. Only approved partners can sign in.	Must
FR-PTR-002	Show only the screens for the partner's approved role: chef, rider, or both if the client allows it (OD-24).	Must
FR-PTR-003	Show profile with photo, role, home hub and verification status. Partners cannot change their own role or verification.	Must
FR-PTR-004	Go on or off duty, and view shifts set by the hub.	Must
FR-PTR-005	Receive new-job alerts with sound and vibration, and see all assigned jobs in one list.	Must
FR-PTR-006	Report an issue on any job (delay, customer unreachable, address problem, damaged items, safety concern), with a photo.	Must
FR-PTR-007	Use an SOS button during any active job that alerts the hub and the client's safety contact, with one-tap call to 112.	Must
FR-PTR-008	Share location only while on an active job, and stop when the job ends.	Must
FR-PTR-009	Open navigation to the hub or customer, and call the customer through a masked number.	Should
FR-PTR-010	View job history and earnings per the agreed pay model (viewing only; payouts are out of scope).	Should
FR-PTR-011	Keep working on weak networks: status updates are saved on the phone and sent when the connection returns.	Should
FR-PTR-012	Use the app in the launch languages agreed with the client.	Should

8.2.2 Chef screens

FR-CHF-001 — See hub kitchen shifts and home visits in one schedule. Must

FR-CHF-002 — View each visit: dishes, guest count, kit checklist, address, timing, customer notes and home checklist. Must

FR-CHF-003 — Accept or decline a visit if the client turns this on; otherwise visits are assigned by the hub. Must

FR-CHF-004 — Tick off the kit checklist at collection. Any missing kit alerts the hub before the chef leaves. Must

FR-CHF-005 — Update status: kits collected, en route, arrived, cooking, completed. Must

FR-CHF-006 — On arrival, show the customer the sealed kits against the order, then start the visit only after entering the customer's visit OTP. Must

FR-CHF-007 — Report unusable home facilities with a photo, so the hub can decide what to do. Must

FR-CHF-008 — Confirm the client's hygiene checklist at the start and end of each visit. Should

8.2.3 Rider screens

FR-RID-001 — Receive delivery assignments while on duty, and accept them. Must

FR-RID-002 — View pickup hub, customer address, delivery instructions, order reference and promised window. Must

FR-RID-003 — Update status: at hub, picked up, en route, at customer, delivered. Must

FR-RID-004 — Capture proof of delivery by customer OTP or photo, as the client decides. Must

FR-RID-005 — Report a failed delivery with a reason, and return the order to the hub. Must

8.3 Operations dashboard: hub manager screens

ID	Requirement	Priority
FR-HUB-001	View live queues of orders and bookings, filtered by status, service, promised time and priority.	Must
FR-HUB-002	Accept, reject or flag orders by capacity and policy, with a recorded reason.	Must
FR-HUB-003	Kitchen queue showing dishes, kits, preparation target time and ready status.	Must
FR-HUB-004	Assign or swap chefs for hub cooking and home visits, blocking double-booking across shifts, travel and visit length.	Must
FR-HUB-005	Assign riders, or send jobs to the delivery company, and monitor pickup and dispatch.	Must
FR-HUB-006	Pack, seal and verify kits for each home visit against the booking checklist before handover to the chef.	Must
FR-HUB-007	Track kit stock: on hand, held, allocated by date, low-stock alerts, batch and expiry where used, adjustments and counts.	Must
FR-HUB-008	Mark a dish or kit unavailable so new orders that cannot be fulfilled are blocked.	Must
FR-HUB-009	Manage partner rosters, shifts and hub closures.	Must
FR-HUB-010	Register new partners for the hub (mobile number, role, documents) and send them for approval.	Must
FR-HUB-011	Handle exceptions with notes, reasons, actions taken and escalation status.	Must
FR-HUB-012	Receive SOS alerts from active visits and deliveries, with partner and customer details, and acknowledge them.	Must
FR-HUB-013	View hub reports: sales, order status, cancellations, fulfilment times, stock and partner use.	Should

8.4 Operations dashboard: super-admin screens

ID	Requirement	Priority
FR-ADM-001	Create, edit, pause and reopen cities and hubs, with address, hours and supported services.	Must
FR-ADM-002	Set each hub's service zone as a radius, drawn map area or postal codes, and handle overlaps.	Must
FR-ADM-003	Manage the catalogue: dishes, serving sizes, kit mappings, recipes, photos, dietary labels and allergens.	Must
FR-ADM-004	Set prices, fees, offers and time limits at platform, city or hub level (Section 4.3).	Must
FR-ADM-005	Manage customers, partners, hub managers, support agents, finance reviewers and their roles.	Must
FR-ADM-006	Approve a partner's role only after verification is recorded; suspend or deactivate a partner with immediate effect.	Must
FR-ADM-007	Set minimum order, guest rules, booking notice, slot length, maximum bookings, hold time and cancellation cut-offs.	Must
FR-ADM-008	Store each hub's food licence number and the invoicing details for each city or state.	Must
FR-ADM-009	Review payments, refunds, settlements and reconciliation.	Must
FR-ADM-010	View consolidated and hub-wise sales, orders, discounts, taxes, refunds, ratings and performance.	Must
FR-ADM-011	Keep an audit trail of every sensitive change and admin action.	Must
FR-ADM-012	Pause a hub or a whole area temporarily without deleting history.	Must
FR-ADM-013	Turn optional features on or off by city or hub (WhatsApp, masked calling, chef accept or decline).	Should
FR-ADM-014	Edit banners, promotions, notification templates and customer-facing policy text.	Should
FR-ADM-015	Export permitted reports to Excel or CSV.	Should

8.5 Orders, holds, payments, invoices and support

FR-OPS-001 — Give each order or booking one reference number and a timestamped status history. Must

FR-OPS-002 — Turn held kits into confirmed reservations on payment, use them on cooking or packing, and release them on valid cancellation. Must

FR-OPS-003 — Prevent duplicate orders and charges when customers retry or the gateway repeats a message. Must

FR-OPS-004 — Track payment and refund status separately from order and booking status. Must

FR-OPS-005 — Allow full or partial refunds only as the approved policy and gateway permit. Must

FR-OPS-006 — Generate a tax invoice for each completed order or booking, from the correct city or state entity, using the prices fixed at confirmation. Must

FR-OPS-007 — Send notifications on every event listed in Section 10. Must

FR-OPS-008 — Keep completed, cancelled and refunded records for reporting, support and legal retention. Must

FR-OPS-009 — Hold kits and, for chef visits, the chef's time when the customer proceeds to pay, and release them automatically when the hold expires. Must

FR-OPS-010 — Check payments against the gateway automatically, and refund in full any paid order that cannot be fulfilled. Must

FR-OPS-011 — Create support cases linked to orders, with category, priority, owner, notes, resolution and time stamps. Should

9. Business rules and operating policies

SECTION 09

Every rule below is configurable; the client must confirm the open ones before build starts on that area.

ID & Rule Name	Rule Definition	Status
BR-001 Hub selection	Choose a hub that serves the address, offers the service, is open, has the kits and has capacity. If several qualify, use the client's tie-breaker (for example nearest, fastest or least busy).	Client to choose tie-breaker
BR-002 Minimum order	Configurable by guest count and basket value. Discussed so far: 2 people or ₹1,200. The exact rule (either, both, or whichever is higher) and whether it differs by service must be confirmed.	Open (OD-01)
BR-003 Service zones	A hub never accepts an order outside its zone. Behaviour at overlapping zones and boundaries must be agreed.	Open (OD-07)
BR-004 Kit availability	Confirm only when all kits can be held. Substitutions need customer consent. No silent substitution.	Proposed
BR-005 Hold before payment	When the customer proceeds to pay, the kits and any chef time are held for a short time (proposed 10 minutes). Unpaid holds are released automatically. A payment that arrives late is either re-held or refunded in full.	Open on hold time (OD-23)
BR-006 Price transparency	Show all prices, fees, discounts and taxes before payment.	Proposed
BR-007 Price snapshot	Prices, fees and taxes are fixed when the order is confirmed. Later menu or price changes never change a confirmed order or its invoice.	Proposed
BR-008 Chef slots	A slot is bookable only if booking notice, a verified chef's availability, visit length, travel buffer, kits for that date and hub hours all fit.	Open config (OD-04)
BR-009 Visit length	Each booking has a planned duration based on dishes and guest count. Overtime rules and charges must be agreed.	Open (OD-03)
BR-010 Cancellation	Separate rules for Food Order and Food with Chef, by stage. Cut-off, fee and refund shown before payment.	Open (OD-05)
BR-011 No-show	Set wait time and contact attempts before a partner marks a no-show, and the charge that applies.	Open (OD-05)
BR-012 Reassignment	If a chef or rider becomes unavailable, operations can reassign, notify the customer, or cancel and refund.	Proposed
BR-013 Proof of completion	Delivery needs OTP or photo proof. A chef visit needs the visit OTP at arrival, which also records the customer's confirmation of the kits, and a completion time stamp.	Open on proof & OTP (OD-22)
BR-014 Verified partners only	Only partners with a current verification and an approved role can go on duty or be assigned. Suspension or deactivation takes effect immediately.	Proposed
BR-015 Kit cold chain	Kits for home visits are packed no earlier than a set time before the slot and carried in insulated bags (Section 11).	Open on time limit
BR-016 Ratings	Only after a completed service. Moderation and removal rules to be agreed.	Open
BR-017 Offers	Each offer has eligibility, dates, hubs, services, usage limits and stacking rules.	Open configuration
BR-018 Operational pause	A hub closure, menu pause, zone pause or stock-out blocks new confirmations and shows the customer a clear message.	Proposed
BR-019 Audit	Changes to prices, menus, stock, zones, policies, refunds, partner approvals and access log who, when and what changed.	Proposed

Policy Readiness Summary (7 Proposed Baseline Rules · 12 Configurable Open Parameters)

Seven foundational integrity rules (**BR-004**, **BR-006**, **BR-007**, **BR-012**, **BR-014**, **BR-018**, **BR-019**) are locked as

10. Notifications

Each event below alerts the listed people; partners receive alerts in the Partner app, and SMS or WhatsApp to customers needs their consent.

Event	Customer	Chef	Rider	Hub manager	Channel
Payment success or failure	Yes	–	–	–	Push, SMS
Order or booking confirmed	Yes	–	–	Yes	Push, SMS or WhatsApp, dashboard
Hub rejects or cannot fulfil	Yes	–	–	Yes	Push, SMS
Chef assigned or changed	Yes	Yes	–	–	Push
Delivery assigned	–	–	Yes	Yes	Push with sound, dashboard
Booking reminder (day before & 2h before)	Yes	Yes	–	–	Push, SMS or WhatsApp
Kits not ready 30m before chef leaves	–	Yes	–	Yes	Push, dashboard
Chef en route and arrived	Yes	–	–	Yes	Push
Food ready for pickup	–	–	Yes	Yes	Push, dashboard
Rider picked up and arriving	Yes	–	–	–	Push
Delivered or visit completed	Yes	–	–	Yes	Push, invoice by SMS or email
Delay beyond promised window	Yes	–	–	Yes	Push, SMS
Cancellation	Yes	Yes	Yes	Yes	Push, SMS
Refund started and completed	Yes	–	–	–	Push, SMS
Low kit stock	–	–	–	Yes	Dashboard, email
Partner approved, suspended or deactivated	–	Yes	Yes	Yes	SMS, push, dashboard
SOS raised by a customer or partner	–	–	–	Yes + safety contact	Push, SMS, phone call

Timings such as the reminder and kit-readiness alerts are configurable by the super admin. Chef and rider columns refer to the partner on that job.

> **Notification Delivery & Regulatory Governance**
> All customer SMS alerts require DLT-registered sender IDs and approved templates (Section 15), while WhatsApp notifications require explicit customer opt-in (**`FR-CUS-018`**) and city/hub feature activation (**`FR-ADM-013`**). Critical operational events — such as delivery assignments (**`FR-PTR-005`**), 30-minute kit-readiness warnings, and SOS escalations (**`UAT-13`**) — trigger immediate audible dashboard or phone alerts.

11. Trust, safety and food safety

SECTION 11

A partner entering a customer's home with raw ingredients is the highest-trust moment in this business, so it needs its own controls.

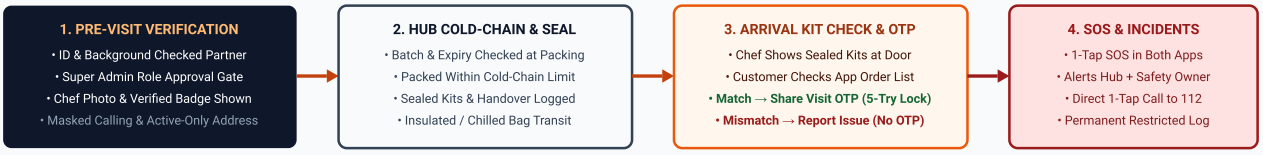

Figure 11.1 — End-to-End Home-Visit Trust, Cold-Chain Kit Verification, Visit OTP Gate & SOS Escalation Architecture

11.1 Home-visit and partner safety

- Only partners with a current verification and an approved role can go on duty or be assigned (**`BR-014`**). The client runs the verification itself (ID and background checks).
- The customer sees the chef's name, photo and verified status before arrival.
- A visit starts only after the customer has checked the kits and the chef enters the customer's visit OTP, so the right chef is at the right home with the ordered kits. The code locks after 5 wrong tries and alerts the hub.
- Customers and partners both have an SOS button during active jobs. It alerts the hub and the client's named safety contact with the job, address and both parties' details, and offers a one-tap call to 112.
- Phone numbers between customers and partners are masked where the calling provider allows it. Customer addresses are shown to partners only during the active job.
- The client sets house rules for partners (dress code, conduct, what they may not do) and for customers (safe workspace, an adult at home). These are shown in the booking.

11.2 Food safety and kit handling

- Every dish lists its allergens and dietary labels, supplied and approved by the client.
- Kits for home visits are packed no earlier than a set time before the slot and carried in insulated or chilled bags.
- The hub checks and seals each kit against the booking and records the handover to the chef. At the home, the chef shows the sealed kits to the customer before cooking (arrival kit check).
- Expired or damaged kits cannot be packed. Kits with batch and expiry tracking are checked at packing.
- The chef confirms the client's hygiene checklist in the Partner app at the start and end of each visit.
- What happens to leftovers, packaging and cleaning after the visit must be agreed (**`OD-10`**).

11.3 Incident handling

- Any safety, hygiene or conduct complaint becomes a high-priority support case.
- The client names an owner who reviews incidents and decides on partner suspension or customer blocking.
- Incident records are kept with restricted access and are not deleted with an account.

12. Data and catalogue management

SECTION 12

The client owns all business data below and names who keeps each record current; technical data design is in the solution architecture.

Record	Minimum information	Kept current by
City	Name, state, invoicing entity and tax registration, default prices and policies, support contacts.	Super admin
Hub	ID, name, city, address, contact, hours, status, services, service zone, capacity, food licence number.	Super admin
Dish	Name, description, photos, ingredients, allergens, dietary labels, serving size, price by level, active dates, services.	Menu owner
Kit	Kit ID, linked dish and version, components and quantities, storage instructions, shelf life, reorder level.	Menu owner, Hub manager
Daily kit plan	Number of each kit the hub will have for each future date, used for chef bookings.	Hub manager
Recipe	Approved steps, portion standard, prep and cook time, hygiene notes. Visible to authorised roles only.	Menu owner
Inventory movement	Receipt, hold, reservation, use, release, transfer, write-off, adjustment, reason, person and time.	Hub manager
Partner	Profile, photo, contact, role or roles, verification status and date, home hub, shifts, availability, job history.	Hub manager, Super admin
Customer	Name, phone, addresses, consents, order history. Only what the service needs.	Customer, Support
Order or booking	Customer, address, hub, service, items, guest count, slot, prices fixed at confirmation, payment, statuses, assignments, exceptions.	System
Payment and refund	Gateway reference, amount, status, dates, reconciliation state, approvals.	System, Finance
Invoice	Number, entity, tax breakdown, customer details, date.	System
Support case, review & incident	Linked order, category, notes, owner, resolution, rating, moderation and incident history.	Support, Client safety owner

Before launch, the client fills a catalogue template for every dish and kit. Nothing is published to customers without the menu owner's sign-off.

13. Reporting and operational controls

SECTION 13

Reports give each role the numbers it acts on, filtered by date, city, hub and service.

13.1 Standard reports

Sales and orders: Volume and value by date, city, hub, service, dish and status. — Super admin, Hub mgr

Revenue breakdown: Gross value, discounts, delivery and chef fees, taxes, refunds and net collection. — Finance

Payments and refunds: Success and failure rates, expired holds, late-payment refunds, pending and failed refunds, reconciliation differences. — Finance

Kitchen performance: Order-to-accept, accept-to-ready, ready-to-pickup and delivery times. — Hub manager

Chef visit performance: Booking lead time, on-time arrival, visit length, reassignments, cancellations. — Hub manager

Inventory: On hand, held, allocated by date, used, low stock, expiry, wastage and adjustments. — Hub manager

Customer experience: Ratings, complaints, cancellation reasons, refunds and repeat orders. — Super admin, Support

Partner activity: Jobs, hours on duty, on-time rate and ratings per chef and rider, by hub and shift. — Hub manager

Safety incidents: Incidents by type, hub, status, acknowledgement time and outcome. — Client safety owner

13.2 Controls

- Every report shows its date range, time zone, filters and last refresh time.
- Financial totals reconcile to transaction records and to the payment gateway's reports.
- Exports are role-based. Customer personal data appears only where the role needs it.
- High-risk actions need a second approval above client-set limits: large refunds, manual price edits and large stock adjustments.

14. Non-functional requirements

SECTION 14

The targets below are proposed starting points so testing has something measurable; the client confirms them once launch volumes are known (**OD-17**).

ID & Area	Requirement	Proposed target
NFR-001 Platforms	Customer and Partner apps run on supported Android and iOS versions, including entry-level Android phones common among partners. The dashboard runs on current browsers.	Android 10+, iOS 16+, last two versions of Chrome, Edge and Safari; minimum partner phone agreed
NFR-002 Performance	Menu, cart, order status, partner job lists and dashboard queues stay responsive at peak meal times.	Screens load in under 3 seconds on 4G for 95% of requests
NFR-003 Availability	The platform is available during operating hours, with maintenance outside peak meal times.	99.5% monthly uptime
NFR-004 Scale	New hubs and cities are added by configuration, with no app release.	Demonstrated by adding a hub in UAT
NFR-005 Security	Secure sign-in, role-based access, multi-factor sign-in for dashboard users, encrypted traffic, protected secrets.	Security review, access tests and an external penetration test pass before launch
NFR-006 Privacy	Collect only needed data; record consent; collect partner location only during active jobs; support data access and deletion requests.	Privacy notice and retention schedule approved
NFR-007 Payment safety	Card and UPI details are handled only by the gateway; the platform stores references and statuses, never raw card data.	Confirmed in gateway integration review
NFR-008 Reliability	Retries, duplicate gateway messages and weak networks do not create duplicate orders, charges or oversold kits.	Retry, recovery and parallel-order tests pass
NFR-009 Monitoring	Errors and privileged actions are logged; named staff get alerts for failures, low stock, unacknowledged SOS and stuck payments or refunds.	Alert list and owners approved
NFR-010 Backup & recovery	Regular backups with tested restores.	At most 15 minutes of data lost; service restored within 4 hours; restore tested before launch
NFR-011 Usability & access	Readable text, clear errors, labelled controls and large touch targets, suited to partners using the app on the move.	UX review and accessibility checklist pass
NFR-012 Localisation	Indian rupee, Indian date and phone formats, agreed launch languages for both apps.	Language list approved
NFR-013 Supportability	Logs, admin guides, release notes and a clear support and escalation process.	Handover pack signed off

Pre-Launch Verification Benchmark

Every target in **NFR-001** through **NFR-013** maps directly to Milestone 6 (**M6**) readiness checks, including parallel-order concurrency testing (**UAT-08**), idempotency verification (**UAT-09**), and backup restore drills (**UAT-19**).

15. Compliance considerations (India)

SECTION 15

The client owns legal and tax compliance and should confirm each item below with qualified advisers; the platform then supports whatever they decide. This is a list of topics to confirm, not legal advice.

Area	What to confirm	Platform support
Food licensing	FSSAI licence or registration for every hub, and what must be shown to customers in the app.	Store and display each hub's licence number (**FR-ADM-008**).
Tax and invoicing	GST treatment for delivered food and for the chef-at-home service, which may differ; invoicing entity per state.	Tax rules and invoicing entity set per city or state; invoice per order (**FR-OPS-006**).
Personal data	Obligations under the Digital Personal Data Protection Act, 2023: notice, consent, purpose, retention, deletion and breach response.	Consent records, account deletion, access controls, retention settings (**FR-CUS-019**, **NFR-006**).
Data location	Primary data is stored in India. Some providers, such as error monitoring or content delivery, may process data elsewhere.	Provider list with data locations, for advisers to approve.
Consumer protection	E-commerce consumer rules: seller details, grievance officer, refund and cancellation policy, full price display.	Policy pages, grievance contact and price breakdown before payment.
Payments	Use an RBI-authorised payment aggregator; refund timelines.	Gateway integration; no card data stored (**NFR-007**).
SMS and WhatsApp	DLT registration of sender IDs and templates for SMS; WhatsApp template approval and opt-in.	Templates managed in the dashboard; consent recorded.
Partner engagement	Employment or contractor terms, insurance, verification and safety duties for chefs and riders.	Verification status and approval gate (**BR-014**, **FR-ADM-006**).
App stores	Google Play and Apple App Store policies for both apps, including account deletion, background location wording and privacy labels.	Built into app scope.

16. External services and dependencies

SECTION 16

The client opens and owns every third-party account below, so the platform keeps working whoever maintains it later.

Payment gateway: UPI, cards, net banking, wallets, refunds and settlement reports. *To confirm:* Provider choice; client completes merchant onboarding and KYC. — Client Owned

OTP and SMS: Sign-in for customers and partners, and transactional SMS. *To confirm:* Provider, DLT sender ID and templates. — Client Owned

Maps and location: Address pinning, service zones, distance, navigation and ETAs. *To confirm:* Provider and expected usage. — Client Owned

Push notifications: Alerts in the Customer and Partner apps. *To confirm:* Client-owned Google and Apple developer credentials. — Client Owned

WhatsApp messaging (optional): Order updates and support messages. *To confirm:* Provider, template approval, opt-in. — Optional

Masked calling (optional): Calls between customers and partners without sharing numbers. *To confirm:* Provider and per-minute usage. — Optional

Delivery company (optional): Third-party riders instead of, or alongside, rider partners on the Partner app. *To confirm:* In-house, third-party or both (**OD-06**); the company's status and proof features. — OD-06

Email: Invoices, reports and dashboard sign-in. *To confirm:* Sending domain and provider. — Client Owned

App stores: Publishing the Customer and Partner apps on Google Play and the App Store. *To confirm:* Client-owned developer accounts and store listings for both apps. — Client Owned

Hosting and monitoring: Running the platform, backups and alerts. *To confirm:* Client-owned cloud account and access. — Client Owned

Usage-based services (SMS, maps, WhatsApp, calling, hosting) carry running costs that the client pays directly.

17. Assumptions, constraints and out of scope

SECTION 17

17.1 Assumptions

- The client owns and runs the hubs, kits, recipes, partners and kitchen operations.
- The client supplies menu content, photos, ingredients, allergens, serving sizes, prices, recipes and policy text.
- The client verifies chefs and riders (ID and background checks) before they are approved in the platform.
- The client names owners for operations, finance, support, food safety, customer and partner safety, data privacy and launch approval.
- The client owns third-party accounts (Section 16) and pays their running costs.
- Hub staff keep stock, daily kit plans, availability and statuses up to date, because the platform's promises depend on them.
- Partners have a smartphone that meets the agreed minimum and a mobile data connection.

17.2 Constraints

- Final scope and launch date depend on the decisions in Section 20 and on third-party capabilities.
- Live tracking and ETAs depend on phone permissions, network quality and the chosen map provider. Background location on Android and iOS is subject to store review.
- There is no fixed maximum number of hubs, but the client must give launch and peak volume forecasts so capacity can be tested.

17.3 Out of scope unless added through change control

- A marketplace for outside restaurants or independent chefs.
- Automated ingredient purchasing, supplier portals or vendor bidding.
- Partner payouts, payroll, HR, attendance, background-check processing, or full accounting or ERP integration. The Partner app shows earnings but does not pay them.
- Multi-drop route optimisation, subscriptions, loyalty wallet, memberships and referrals.
- Kitchen hardware, POS terminals, IoT sensors, weighing scales and kitchen display screens.
- Franchise billing, white-labelling for other brands, and operations outside India.
- Any integration not listed in Section 16.

Figure 17.1 — Scope Boundary Matrix: Platform Build Scope vs. Client Operational Ownership vs. Excluded Change-Control Items

18. Acceptance criteria and UAT scenarios

SECTION 18

The platform is ready for the pilot when every scenario below passes in UAT, no critical or high defects remain open (unless the client waives them in writing), and the named business owners sign off.

UAT ID	Scenario and expected result	Covers
UAT-01	Admin creates a new city and hub with a service zone; it takes orders without an app release.	FR-ADM-001, FR-ADM-002, NFR-004
UAT-02	Customer at a serviceable address completes a Food Order from menu to payment, kitchen, rider delivery with proof, and invoice.	FR-CUS-003 to 013, FR-CUS-016, FR-HUB-003, FR-RID-001 to 004, FR-OPS-006, 007
UAT-03	Customer books a chef; the booking is offered and accepted only when slot, chef and kits fit the rules.	FR-CUS-009, FR-HUB-004, BR-008
UAT-04	Chef partner collects verified kits, travels, shows the kits to the customer, enters the visit OTP, cooks and completes the visit. A customer who reports a missing kit instead of sharing the OTP starts the hub's exception flow.	FR-HUB-006, FR-CHF-004 to 006, FR-CUS-014
UAT-05	Customer outside every zone cannot order and sees a clear message.	FR-CUS-003, BR-003
UAT-06	Minimum-order, guest-count, fee, offer and cancellation rules apply the same at cart, checkout and after the order.	FR-CUS-008, FR-CUS-010, BR-002, BR-010, BR-017
UAT-07	Kits are held at checkout, reserved on payment, used on cooking or packing, released on cancellation, and shown correctly in reports.	FR-OPS-002, FR-OPS-009, FR-HUB-007
UAT-08	Many customers try to buy the last few kits, or book the same chef slot, at the same time: no kit is oversold and no chef is double-booked.	FR-OPS-009, FR-HUB-004, NFR-008
UAT-09	Repeated payment attempts and duplicate gateway messages create one order and one charge.	FR-OPS-003, NFR-008
UAT-10	Customer does not pay within the hold time: kits and chef time return to availability. A payment that arrives after expiry is re-held or refunded in full automatically.	FR-CUS-020, FR-OPS-009, FR-OPS-010, BR-005
UAT-11	Cancellation at each stage gives the refund the policy promises, and the refund is tracked to completion.	FR-CUS-017, FR-OPS-005, BR-010
UAT-12	A chef or rider becomes unavailable; the hub reassigns or cancels and the customer is notified.	FR-HUB-004, FR-HUB-005, BR-012
UAT-13	SOS from a customer or partner alerts the hub and the safety contact within 1 minute.	FR-CUS-015, FR-PTR-007, FR-HUB-012
UAT-14	A chef-only partner sees no delivery jobs, a rider-only partner sees no home visits, and an unapproved or deactivated partner cannot sign in or go on duty.	FR-PTR-001 to 003, FR-ADM-006, BR-014
UAT-15	A hub manager cannot see another hub's data; a support agent cannot refund above the limit.	Section 5, NFR-005
UAT-16	A price change after confirmation does not change the confirmed order or its invoice.	BR-007, FR-OPS-006
UAT-17	Financial reports match order, payment and refund records for the test period.	FR-ADM-009, FR-ADM-010, Section 13.2
UAT-18	Customer deletes their account; personal data is removed except records the law requires keeping.	FR-CUS-019, NFR-006
UAT-19	Backup restore, monitoring alerts and support handover are demonstrated.	NFR-009, NFR-010, NFR-013

End-to-End Requirement Traceability

Scenarios **UAT-01** to **UAT-19** serve as formal Milestone Gates across **M3**, **M4**, **M5** and **M6** (Section 19), ensuring every functional, business-rule, and non-functional requirement is verified prior to pilot launch.

19. Milestones, pilot launch and change control

Work runs in six milestones that match the solution architecture, and each starts only after the client approves the gate of the one before.

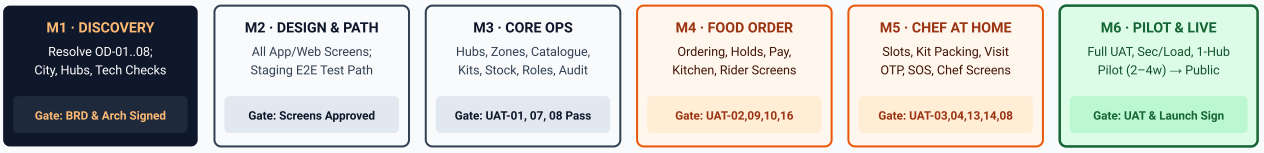

Figure 19.1 — Six-Stage Gated Delivery Roadmap from Discovery (M1) to One-Hub Pilot & Public Launch (M6)

1. **M1 – Discovery and technical checks.** Resolve **`OD-01`** to **`OD-08`**; confirm launch city and hubs, roles, policies and integrations. Prove the riskiest technical pieces early.
   • *Gate:* this BRD signed; solution architecture approved.
2. **M2 – Design and first working path.** Screens for the Customer app, both Partner app roles and the dashboard, including exceptions. A test order travels end to end in a staging environment.
   • *Gate:* client approves key screens and flows.
3. **M3 – Core operations.** Cities, hubs, zones, settings, catalogue, kits, daily kit plans, stock, roles, partner onboarding and approval, audit trail.
   • *Gate:* **`UAT-01`** passes; kit tests in **`UAT-07`** and **`UAT-08`** pass.
4. **M4 – Food Order end to end.** Customer app ordering, holds, payments, invoices, notifications, kitchen queue, and the rider screens of the Partner app.
   • *Gate:* **`UAT-02`**, **`UAT-09`**, **`UAT-10`** and **`UAT-16`** pass in staging.
5. **M5 – Chef at home.** Slots, chef holds, kit packing, visit OTP, SOS, and the chef screens of the Partner app.
   • *Gate:* **`UAT-03`**, **`UAT-04`**, **`UAT-13`**, **`UAT-14`** and the chef tests in **`UAT-08`** pass.
6. **M6 – UAT, pilot and launch.** Full UAT, security and load tests, restore drill, store submission of both apps and staff training. Then a pilot at one hub with invited customers for 2 to 4 weeks, with real but limited orders, before the public launch.
   • *Gate:* written UAT sign-off, pilot review and launch approval.

The pilot does not reduce the scope: every feature is live, only the audience is limited while real-world issues are found and fixed.

> **Change control**
> Any feature, rule or integration not written in this document is a change request. Each request is assessed for its effect on scope and launch date and needs client approval before work starts. Milestone dates are set in the project plan once M1 is complete.

20. Open questions and decisions

SECTION 20

OD-01 to **OD-08** block design and must be answered in M1; the rest can follow during M2. IDs stay fixed across versions so other documents can refer to them.

ID	Decision needed	Options or detail	Owner
OD-01	**Minimum-order rule**	2 people or ₹1,200; both; whichever is higher; or another rule. Same for both services? Varies by city or hub?	Client · M1
OD-02	**Launch city and first hubs**	Launch city, number of hubs, service zones, operating hours and target launch date.	Client · M1
OD-03	**Chef visit fee and length**	Per booking, per hour, by guest count, by distance or by menu. Minimum length, overtime and travel fees.	Client · M1
OD-04	**Chef booking rules**	Same-day allowed? Minimum notice, slot length, buffers, maximum guests, booking cut-off.	Operations · M1
OD-05	**Cancellation, no-show & refunds**	Cut-offs, charges and refund percentages by service and stage; late chef or rider; customer not home.	Client, Fin · M1
OD-06	**Rider model**	In-house rider partners on the Partner app, a third-party delivery company, or both.	Operations · M1
OD-07	**Service-zone & tie-breaker**	Radius, drawn areas or postal codes; rule for overlaps; how to pick between eligible hubs.	Operations · M1
OD-08	**Payment gateway & settlement**	Provider, refund timelines, reconciliation schedule, refund approval limits.	Finance · M1
OD-09	**What customer provides at home**	Stove, gas, cookware, utensils, serving dishes, workspace, water. Checklist shown at booking.	Operations
OD-10	**After the visit**	Does the chef clean up? Who handles leftovers and packaging waste?	Operations
OD-11	**Substitutions and stock-outs**	Allowed or not; customer consent; price adjustment or refund.	Menu owner
OD-12	**Partner verification**	Who verifies chefs and riders, which checks, how often renewed; who the safety contact is.	Client
OD-13	**Scheduled Food Orders**	ASAP only, or pre-order for later today or tomorrow?	Client
OD-14	**Large and event bookings**	Maximum guests per chef; multiple chefs for big events; advance notice.	Operations
OD-15	**Pricing and tax display**	Prices with or without tax, fees, rounding, offer stacking, invoice format and entity per state.	Finance
OD-16	**Languages and support**	Launch languages for both apps, support channels and hours, response times, escalation.	Customer exp.
OD-17	**Target volumes**	Orders per day, peak-hour orders, active partners, hub growth over 12 to 24 months.	Client
OD-18	**Permissions & approval limits**	Who edits prices, adjusts stock, approves partners, cancels orders, approves refunds and sees customer data.	Client
OD-19	**Account ownership**	Who owns cloud, domain, app store, gateway, SMS, WhatsApp and maps accounts.	Client
OD-20	**Post-launch support**	Who fixes issues after launch, support hours, severity levels and response times.	Client
OD-21	**Brand and app names**	Final names for the Customer and Partner apps, logos and store listings.	Client
OD-22	**Visit OTP and delivery proof**	4-digit OTP (easier to read out) or 6-digit (harder to guess); both lock after 5 wrong tries. OTP or photo for delivery proof.	Client
OD-23	**Checkout hold time**	How long kits and chef time are held while the customer pays; 10 minutes proposed.	Client, Ops
OD-24	**Partners with both roles**	Can one person be both a chef and a rider, or does each	Operations

21. Key risks and mitigations

SECTION 21

The two risks most likely to hurt launch are the size of the full launch scope and a safety incident during a home visit.

Risk	Impact	Mitigation	Owner
Full scope at launch	Two mobile apps, a dashboard and shared services at once stretch delivery time and testing.	Milestone gates, change control, early decisions on OD-01 to OD-08, and a pilot before public launch.	Client, Delivery lead
Safety incident during a home visit or delivery	Harm to a customer or partner; serious damage to the brand.	Verified partners only, visit OTP, SOS, masked numbers, incident owner (Section 11).	Client safety owner
Partner app serving two roles	A partner sees the wrong jobs, or the app becomes cluttered.	Screens and permissions by approved role, tested separately for each role (UAT-14).	Delivery lead
Partner adoption	Partners on low-end phones or weak networks struggle to use the app.	Agreed minimum phone, offline-tolerant status updates, local languages, short training at onboarding.	Operations
Food safety in transit	Kits spoil on the way to a home visit.	Pack-time limit, insulated bags, handover record, expiry checks.	Food operations
Wrong or stale stock	Orders confirmed that cannot be fulfilled; refunds and bad ratings.	Holds before payment, stock history, daily kit plans, low-stock alerts, regular counts.	Hub manager
Overbooked chefs or slots	Late arrivals and cancellations.	Slots that account for visit length, travel and shifts; chef time held before payment; reassignment flow.	Operations
Unclear cancellation policy	Disputes, inconsistent refunds and revenue loss.	Approved policy matrix shown before payment; audit of exceptions.	Client, Finance
Overlapping hub zones	Confusing hub choice, prices or ETAs.	One fixed hub-selection rule, tested at boundaries.	Operations
Third-party outage	OTP, payments, maps or messages fail.	Retries, clear customer messages, manual fallback and vendor escalation.	Delivery lead, Ops
Poor menu data at launch	Wrong prices, portions or allergens reach customers.	Signed catalogue template; nothing published without menu owner approval.	Menu owner
App store review delays	Launch date slips for one or both apps.	Early test submissions, client-owned accounts set up in M2, clear permission wording.	Delivery lead
Unknown peak volumes	Slow or unstable app at meal times.	Volume forecasts (OD-17) and load testing before launch.	Client, Delivery lead
Unclear ownership after launch	Incidents, renewals or store issues go unhandled.	Named account owners, support hours and escalation agreed before go-live (OD-19, OD-20).	Client

22. Approval and sign-off

SECTION 22

By signing, each stakeholder confirms this document reflects the agreed scope, and that open questions are either resolved in the decision log or accepted as prerequisites. This does not replace any legal, privacy or regulatory review.

Stakeholder role	Name	Decision (Approve / Revise)	Signature	Date
Client business owner	[Name]	[Approve / Revise]	_____	[Date]
Operations or hub representative	[Name]	[Approve / Revise]	_____	[Date]
Finance representative	[Name]	[Approve / Revise]	_____	[Date]
Food safety and safety owner	[Name]	[Approve / Revise]	_____	[Date]
Delivery lead	**Sanjeev Simhadri**	[Approve / Revise]	_____	28 Oct 2026
